

Postman Flow

Users Folder

Send OTP

- url to send is

```
METHOD : POST
URL : {{prod_url_portal}}/users/send-otp
```

- example body

```
{
  "phone":"+201554477068"
}
```

- example response

```
{
  "message": "OTP sent successfully",
  "otp": "1234"
}
```

Verify OTP

- url to send is

```
METHOD : POST
URL : {{prod_url_portal}}/users/verify-otp
```

- example body

```
{  
  "phone":"+201554477068",  
  "otp":"1234"  
}
```

- example response

```
{  
  "message": "User signed in successfully",  
  "token": "eyJhbGciOiJIUzI1NiIsInR5cCI6IkpXVCJ9.eyJ1c2VySWQiOiJU0LCJ"  
}
```

Take the token to authorize the user in protected routes

Complete Profile

- url to send is

```
METHOD : PATCH  
URL : {{prod_url_portal}}/users/complete-profile  
HEADERS → { authentication : prod_token_user_portal }
```

- example body

```
{  
  "name":"moataz emad",  
}
```

- example response

```
{  
  "status": true,  
  "message": "Profile updated successfully",  
}
```

```
"isPhoneChanged": false
}
```

Note : once user verify token will be generated take this token add it in

{{prod_token_user_portal}} env to send this token alongside the server so i know if this user signed in successfully or not.

Get User details

- url to send is

```
METHOD : GET
URL : {{prod_url_portal}}/users/get-user-details
HEADERS → { authentication : prod_token_user_portal }
```

- example response

```
{
  "status": true,
  "currentUser": {
    "name": "moataz",
    "phone": "+201554477068",
    "email": "moatazmad772@gmail.com",
    "cv": null,
    "city": "Riyadh",
    "job": "Software engineer"
  }
}
```

Sign In

- url to send is

```
METHOD : POST
```

URL : {{prod_url_portal}}/users/sign-in

- example body

```
{
  "phone":"+201554477068",
  "password":"MoatazEmad1234"
}
```

- example response

```
{
  "status": true,
  "msg": "Signed in successfully",
  "token": "eyJhbGciOiJIUzI1NiIsInR5cCI6IkpXVCJ9.eyJ1c2VySWQiOiJU0LCJ
}
```

Note : You need to change the variable {{prod_token_user_portal}} to reflect the new token.

Admins Folder

Sign In

- url to send is

METHOD : POST
URL : {{prod_url_portal}}/admin/sign-in

- example body

```
{
  "username":"moataz",
}
```

```
{
  "password": "MoatazEmad0101"
}
```

- example response

```
{
  "status": true,
  "msg": "Signed in successfully",
  "token": "eyJhbGciOiJIUzI1NiIsInR5cCI6IkpXVCJ9.eyJ1c2VySWQiOiJMslnJv
}
```

Note : You need to change the variable `{{prod_token_admin_portal}}` to reflect the new token keep in mind its `not` `{{prod_token_user_portal}}` .

Get All Users

- url to send is

```
METHOD : GET
URL : {{prod_url_portal}}/admin/get-all-users
HEADERS → { authentication : prod_token_admin_portal }
```

- example response

```
{
  "status": true,
  "msg": "Users fetched successfully",
  "users": [
    {
      "id": 54,
      "fullName": "moataz emad",

    "currentPage": 1
  }
}

```

Add Admin

- url to send is

```

METHOD : POST
URL : {{prod_url_portal}}/admin/add-admin
HEADERS → { authentication : prod_token_admin_portal }

```

- example body

```

{
  "username": "ahmed",

```

```
"password":"AhmedAli0101",  
"role":"ADMIN"  
}
```

- example response

```
{  
  "status": true,  
  "msg": "Admin created successfully"  
}
```

Delete User

- url to send is

```
METHOD : DELETE  
URL : {{prod_url_portal}}/admin/delete-user/45  
HEADERS → { authentication : prod_token_admin_portal }
```

- example response

```
{  
  "status": true,  
  "msg": "User deleted successfully"  
}
```

Blogs Folder

Get All Blogs By User

- url to send is

```
METHOD : GET  
URL : {{prod_url_portal}}/users/get-all-blogs
```

```
HEADERS → { authentication : prod_token_user_portal }
```

- example response

```
{
  "status": true,
  "msg": "Blogs fetched successfully",
  "blogs": [
    {
      "blogId": 1,
      "title": "lets change the title",
      "content": "this is a new blog from me",
      "publishedAt": "2025-07-22T18:23:39.562Z"
    }
  ],
  "pagination": {
    "limit": 10,
    "offset": 0,
    "total": 1,
    "currentPage": 1
  }
}
```

Add Comment By User

- url to send is

```
METHOD : POST
URL : {{prod_url_portal}}/users/add-comment/1
HEADERS → { authentication : prod_token_user_portal }
```

- example body

```
{
  "content": "can you explain more"
```

```
}
```

- example response

```
{
  "status": true,
  "message": "Comment added successfully wait for approval",
  "comment": {
    "id": 2,
    "content": "can you explain more",
    "isApproved": false,
    "submittedAt": "2025-07-29T09:58:17.524Z",
    "updatedAt": "2025-07-29T09:58:17.524Z",
    "blogId": 1,
    "createdBy": 54
  }
}
```

Get Single Blog By User

- url to send is

```
METHOD : GET
URL : {{prod_url_portal}}/users/get-blog-by-id/1
HEADERS → { authentication : prod_token_user_portal }
```

- example response

```
{
  "status": true,
  "msg": "Blog fetched successfully",
  "blog": {
    "blogId": 1,
    "title": "lets change the title",
    "content": "this is a new blog from me",
  }
}
```

```

    "publishedAt": "2025-07-22T18:23:39.562Z",
    "comments": [
      {
        "id": 1,
        "content": "this is very good blog",
        "isApproved": true,
        "submittedAt": "2025-07-22T18:39:01.701Z",
        "updatedAt": "2025-07-22T19:11:04.989Z",
        "blogId": 1,
        "createdBy": 55
      }
    ]
  }
}

```

Note : as you see the new comment does not exist it need to be approved by admin

Get All Comments By Admin

- url to send is

```

METHOD : GET
URL : {{prod_url_portal}}/admin/get-all-comments
HEADERS → { authentication : prod_token_admin_portal }

```

- example response

```

{
  "status": true,
  "msg": "Comments fetched successfully",
  "comments": [
    {
      "commentId": 1,
      "content": "this is very good blog",
      "isApproved": true,

```

```

    "submittedAt": "2025-07-22T18:39:01.701Z",
    "updatedAt": "2025-07-22T19:11:04.989Z",
    "blogTitle": "lets change the title",
    "userName": "eyad",
    "blogId": 1
  },
  {
    "commentId": 2,
    "content": "can you explain more",
    "isApproved": false,
    "submittedAt": "2025-07-29T09:58:17.524Z",
    "updatedAt": "2025-07-29T09:58:17.524Z",
    "blogTitle": "lets change the title",
    "userName": "moataz emad",
    "blogId": 1
  }
],
"pagination": {
  "limit": 10,
  "offset": 0,
  "total": 2,
  "currentPage": 1
}
}

```

Note : in the second item we see the comment but its not approved so users can not see this comment yet.

Approve Comment By Admin

- url to send is

METHOD : POST

URL : {{prod_url_portal}}/admin/approve-comment/2/1

HEADERS → { authentication : prod_token_admin_portal }

- example body

```
{
  "isApproved":true
}
```

- example response

```
{
  "status": true,
  "msg": "Comment Approved successfully",
  "updatedComment": {
    "id": 2,
    "content": "can you explain more",
    "isApproved": true,
    "submittedAt": "2025-07-29T09:58:17.524Z",
    "updatedAt": "2025-07-29T10:06:32.339Z",
    "blogId": 1,
    "createdBy": 54
  }
}
```

Now the comment is approved users can see it now.

Get All Blogs By Admin

- url to send is

```
METHOD : GET
URL : {{prod_url_portal}}/admin/get-all-blogs
HEADERS → { authentication : prod_token_admin_portal }
```

- example response

```
{
  "status": true,
```

```

"msg": "Blogs fetched successfully",
"blogs": [
  {
    "blogId": 1,
    "title": "lets change the title",
    "content": "this is a new blog from me",
    "publishedAt": "2025-07-22T18:23:39.562Z",
    "adminName": "moataz"
  }
],
"pagination": {
  "limit": 10,
  "offset": 0,
  "total": 1,
  "currentPage": 1
}
}

```

Get Single Blog By Admin

- url to send is

```

METHOD : GET
URL : {{prod_url_portal}}/admin/get-blog-by-id/1
HEADERS → { authentication : prod_token_admin_portal }

```

- example response

```

{
  "status": true,
  "msg": "Blog fetched successfully",
  "blog": {
    "blogId": 1,
    "title": "lets change the title",
    "content": "this is a new blog from me",

```

```
"publishedAt": "2025-07-22T18:23:39.562Z",
"adminName": "moataz",
"comments": [
  {
    "id": 1,
    "content": "this is very good blog",
    "isApproved": true,
    "submittedAt": "2025-07-22T18:39:01.701Z",
    "updatedAt": "2025-07-22T19:11:04.989Z",
    "blogId": 1,
    "createdBy": 55
  },
  {
    "id": 2,
    "content": "can you explain more",
    "isApproved": true,
    "submittedAt": "2025-07-29T09:58:17.524Z",
    "updatedAt": "2025-07-29T10:06:32.339Z",
    "blogId": 1,
    "createdBy": 54
  }
]
}
```

Admin can get all the comments in single blog even if its not approved

Jobs Folder

Get All Jobs

- url to send is

METHOD : GET

URL : {{prod_url_portal}}/users/get-all-jobs

```
HEADERS → { authentication : auth }
```

auth means that the user need to be registered in the system.

- example response

```
{
  "status": true,
  "jobs": [
    {
      "id": 1,
      "title": "Software engineer"
    },
    {
      "id": 2,
      "title": "Back end developer"
    },
    {
      "id": 3,
      "title": "Front end developer"
    }
  ]
}
```

Get Jobs Pagination

- url to send is

```
METHOD : GET
```

```
URL : {{prod_url_portal}}/users/get-jobs-pagination
```

any one can access this route.

- example response

```

{
  "status": true,
  "jobs": [
    {
      "id": 1,
      "title": "Software engineer"
    },
    {
      "id": 2,
      "title": "Back end developer"
    },
    {
      "id": 3,
      "title": "Front end developer"
    }
  ],
  "pagination": {
    "limit": 10,
    "offset": 0,
    "total": 3,
    "currentPage": 1
  }
}

```

Add Job By Admin

- url to send is

```

METHOD : POST
URL : {{prod_url_portal}}/admin/add-job
HEADERS → { authentication : prod_token_admin_portal }

```

- example body

```
{
  "jobTitle": "not-valid-job"
}
```

- example response

```
{
  "status": true,
  "msg": "Job created successfully",
  "addedJob": {
    "id": 4,
    "title": "not-valid-job"
  }
}
```

Cities Folder

Get All Cities

- url to send is

```
METHOD : GET
URL : {{prod_url_portal}}/users/get-all-cities
HEADERS → { authentication : auth }
```

auth means that the user need to be registered in the system.

- example response

```
{
  "status": true,
  "cities": [
    {
      "id": 9429,
```

```
    "name": "Riyadh"
  },
  {
    "id": 9430,
    "name": "Dammam"
  },
  {
    "id": 9431,
    "name": "Jeddah"
  },
  {
    "id": 9432,
    "name": "Tabuk"
  },
  {
    "id": 9433,
    "name": "Buraidah"
  },
  {
    "id": 9434,
    "name": "Makkah"
  },
  {
    "id": 9435,
    "name": "Ha'il"
  },
  {
    "id": 9436,
    "name": "Medina"
  },
  {
    "id": 9437,
    "name": "Sulṭānah"
  },
  {
    "id": 9438,
```

```
    "name": "Ta'if"
  }
]
}
```

Get Cities Pagination

- url to send is

METHOD : GET

URL : {{prod_url_portal}}/users/get-cities-pagination

any one can access this route.

- example response

```
{
  "status": true,
  "cities": [
    {
      "id": 9429,
      "name": "Riyadh"
    },
    {
      "id": 9430,
      "name": "Dammam"
    },
    {
      "id": 9431,
      "name": "Jeddah"
    },
    {
      "id": 9432,
      "name": "Tabuk"
    },
    {
```

```
    "id": 9433,  
    "name": "Buraidah"  
  },  
  {  
    "id": 9434,  
    "name": "Makkah"  
  },  
  {  
    "id": 9435,  
    "name": "Ha'il"  
  },  
  {  
    "id": 9436,  
    "name": "Medina"  
  },  
  {  
    "id": 9437,  
    "name": "Sulṭānah"  
  },  
  {  
    "id": 9438,  
    "name": "Ta'if"  
  }  
],  
"pagination": {  
  "limit": 10,  
  "offset": 0,  
  "total": 4202,  
  "currentPage": 1  
}  
}
```

Add City By Admin

- url to send is

METHOD : POST

URL : {{prod_url_portal}}/admin/add-city

HEADERS → { authentication : prod_token_admin_portal }

- example body

```
{  
  "cityName": "not-valid-city"  
}
```

- example response

```
{  
  "status": true,  
  "msg": "City created successfully",  
  "addedCity": {  
    "id": 13632,  
    "name": "not-valid-city"  
  }  
}
```

Error Handling

I have defined one way error handling if user sent bad data or the server can not complete the process for some reason lets see solid example :

Imagine in `Send OTP` for strange reason user send the following body :

```
{  
  "phone": "abcd"  
}
```

The expected response will be with status code `400` :

```
{  
  "msg": "Invalid phone number format"  
}
```

You need to catch this error msg and display it to the user.

Note : the msg changes based on what happened

Env Variables

We have 3 variables :

1. `prod_url_portal`
Its the url of the server
2. `prod_token_admin_portal`
Its the token when
`admin` sign in successfully
3. `prod_token_user_portal`
Its the token when
`user` sign in successfully

Note : You need to change it when ever the sign in happen
